

AMENDMENTS TO THE SPECIFICATION

The specification has been rewritten as follows:

BACKGROUND OF THE INVENTION

Paragraph [0006] has been rewritten as follows:

[0006] The flow control valve assembly operates very effectively on machinery that is predominately stationary. However, when the control valve assembly is mounted to vehicles' fuel tanks, such as those located in trucks and excavators, some difficulties may be experienced during movement of the vehicle.

SUMMARY OF THE INVENTION

Paragraph [0012] has been rewritten as follows:

[0012] a housing having a passageway that extends through the housing; and having openings for liquid in the container to pass in and out of the passageway;

Paragraph [0013] has been rewritten as follows:

[0013] a breather float valve mounted within the housing, the breather float valve movable between an open position to allow gas to pass through the passageway and a closed position that prevents liquid from passing through the passageway; a liquid inlet forming part of the housing, the liquid inlet allowing fluid to pass into the housing;

Paragraph [0014] has been rewritten as follows:

[0014] an liquid inlet, forming part of the housing, the liquid inlet allowing fluid to pass into the housing; and an inlet float valve mounted within the housing, the inlet float valve movable between an open position that permits the flow of liquid through the liquid inlet and a closed position that prevents the flow of liquid through the liquid inlet; and

Paragraph [0015] has been rewritten as follows:

[0015] an inlet float valve mounted within the housing, the inlet float valve movable between an open position that permits the flow of liquid through the liquid inlet and a closed position that prevents the flow of fluid through the liquid inlet; a breather float valve mounted within the housing, the breather float valve movable with liquid level in the housing between an open position to allow gas to pass through the passageway and out of the

housing, and a closed position that prevents liquid from passing through the passageway and out of the housing:

Paragraph [0016] has been rewritten as follows:

[0016]-Preferably, the valve assembly also includes a relief valve that is movable between an open position and a closed position to allow pressure to be relieved from the container, the valve assembly characterized in that includes a relief valve that is movable between an open position and a closed position to allow pressure to be relieved from the container.
